

Bringing Integrity to Product Data™

Innovit Australia

Innovit is a leading provider of product data management software solutions. Our suite of iICE products provide companies of all sizes with tools that range from product data validation, to advanced Product Information Management (PIM) systems.

Innovit is a Business Alliance Partner of GS1 Australia.

EANnet®

Based on global standards, EANnet enables trading partners in the retail supply chain to synchronise their product data, and gain secure access to commercially sensitive information including pricing, promotion, trading terms, and the locations of products and services. Managed locally by GS1 Australia, EANnet is one of many data pools that are interconnected by industry standards, providing companies with global access to product master data.

EANnet® is a trademark of GS1 Australia.

iICE EANnet Solutions

Data integrity has become one of the most important aspects within any company's supply chain process.

Organisations worldwide are now managing, and synchronising their product data with key trading partners. For many companies that trade across multiple industries and/or retail channels, the complexity of product data management quickly increases due to diversity in trading partner requirements.

Recognising this challenge, data pools like EANnet® now provide electronic trading communities with a standardised platform for product data synchronisation. Retail buyers can receive product catalogues from their suppliers via EANnet knowing that the product data conforms to industry standards, and has been validated with a high degree of integrity.

To facilitate this process, Innovit have developed the iICE Validator™ suite of EANnet solutions. iICE Validator is designed to help organisations to manage their EANnet product catalogues. Fully certified by GS1 Australia, these tools can be deployed quickly and easily, giving users an effective path toward EANnet readiness and compliance. These tools can be used independently to validate and load EANnet product data, or as part of a comprehensive, enterprise-wide iICE Product Data Manager (PDM) solution.

iICE Validator Standard

The iICE Validator *Standard* is a user-friendly data validation tool designed for suppliers to ensure that their EANnet Loadfile (IDF/PPF) is compliant with industry standards. It can also be used by companies that are beginning the data gathering and cleansing phase of their EANnet project, or are building their own EANnet integrated solutions. The user simply has to 'load and review' catalogue data with the intuitive graphical error logs and data integrity reports. Once data has been validated successfully, it can be uploaded to EANnet.

iICE Validator Plus

For suppliers who require more than just data validation, iICE Validator *Plus* provides the added advantage of catalogue maintenance to correct any errors found in their EANnet Loadfile. Once all errors have been corrected, and the file is fully validated, it can be uploaded to EANnet. Users can then review the Data Load Status Report (DLSR) to ensure the process has been completed successfully.

iICE Validator Premium

iICE Validator *Premium* is a complete catalogue management system designed ideally for suppliers who need to maintain hundreds of items (GTINs) for EANnet. Users can import an existing EANnet Loadfile for maintenance, or manually create EANnet catalogues with the user-friendly graphical interface.

iICE Express

For organisations that require an enterprise wide system to manage all their product data, iICE Express is the answer. With a built-in module for EANnet, iICE Express becomes a comprehensive platform for managing all forms of product data across an organisation's many business systems and processes. It allows your organisation to go beyond 'EANnet compliance' by delivering rich product information for both internal and external business applications such as sales & marketing, customer service, e-commerce, warehouse management and catalogue production.

iICE Express delivers data consistency and data accuracy by providing effective validation & control over product data ~ right from product concept creation, through to item maintenance, and eventually data synchronisation with trading partners. Its configurable workflow capabilities are designed to promote efficient business processes for managing new product introductions, product lifecycles, images & rich content.

*All Validator solutions from Innovit include a built-in communications module for uploading data to EANnet. They can be self-installed and upgraded over the Web without any need for integration, file mapping, or complex configuration processes. Every system comes complete with on-line instructions that guide the user through operating procedures step by step.

Features	iICE Validator Standard	iICE Validator Plus	iICE Validator Premium	iICE Express
Companies (GLN)	Unlimited	Unlimited	Unlimited	Unlimited
Data Validation Rules	Pre-configured	Pre-configured	Pre-configured	Pre-configured & Customisable
Error Logging & Reporting	Yes	Yes	Yes	Yes, User Customisable
Graphical Error Reporting	Yes	Yes	Yes	Yes
Other Input Formats	IDF/PPF Loadfile	Yes, IDF/PPF Loadfile (Forms & Excel style)	IDF/PPF Loadfile (Forms & Excel style)	Unlimited file formats, User-definable screens
